Professional Summary

Full-Stack Software Engineer with **3.5+ years** of experience, specializing in backend development and scalable system design. Proficient in building production-grade APIs and microservices using **Node.js, Express.js, TypeScript, NestJS, and PostgreSQL/MySQL**.

Experienced in developing multi-tenant SaaS platforms, implementing secure authentication (**JWT, RBAC**), and optimizing database architectures for high performance and reliability. Skilled in AWS-based deployments, **CI/CD pipelines**, and delivering robust, maintainable full-stack solutions with seamless frontend-backend integration.

Skills

Backend: Node.js, Express.js, NestJS, TypeScript, JavaScript (ES6+), REST API Design, Microservices Architecture, JWT, RBAC, Authentication, Authorization

Frontend: React, Next.js, Angular, Redux, HTML5, CSS3

Databases: MongoDB, MySQL, Redis, Schema Design, Query Optimization, Caching Strategies

Cloud & DevOps: AWS EC2, CI/CD, GitHub Actions, Docker, Cloud Deployment

Tools & Practices: Git, Swagger, Postman, API Performance Optimization, Clean Architecture, Agile/Scrum, Code Reviews

Experience

Blue Enigma, Sr. Software Engineer

Feb 2026 - Present, Noida

- Led backend development using **NestJS**, building scalable APIs for booking management, real-time availability, and hotel operations in a multi-tenant PMS system.
- Designed and optimized PostgreSQL database architecture, including relational schema design, indexing, and query optimization to ensure high performance and data consistency.
- Architected a modular and scalable backend system, enabling seamless integration of an **dynamic pricing engine** and supporting concurrent bookings with low latency.
- Integrated an AI-based dynamic pricing system into the backend, enabling real-time price adjustments based on demand, occupancy, and historical trends.

Oriserve India Pvt. Ltd., Software Engineer

Mar 2025 - Jan 2026, Noida

- Architected and owned core backend features for **Orimon.ai** AI-powered chatbot platform using **Node.js, Express.js, and TypeScript**, including workflow automation engine, FAQ management system, and chat summarization services, improving automated query resolution and user experience
- Designed and implemented RESTful API endpoints for multilingual training logic with intelligent duplicate detection and suppression mechanisms, reducing redundant API calls and improving system efficiency
- Built complex integration layer connecting CRM systems and live chat escalation services through custom REST APIs, ensuring seamless handoff between automated and human-assisted support channels
- Optimized message processing pipeline using asynchronous queuing and batch processing patterns in **Node.js**, significantly improving API response times and system throughput

- Architected and developed multi-tenant Carbon Emissions Reporting SaaS platform backend using **NestJS, Node.js, TypeScript, and MongoDB**, processing thousands of emission calculations monthly with a reliable performance
- Built centralized authentication and authorization system using **JWT and RBAC in Node.js**, successfully deployed across multiple platform ecosystems, eliminating code duplication and ensuring consistent security policies
- Managed end-to-end deployment of microservices architecture and React applications on **EC2 Service, implementing CI/CD** pipelines with GitHub Actions that streamlined deployment processes and enabled frequent releases
- Optimized MongoDB and MySQL query performance through strategic indexing and batch processing or significantly reducing API latency and stabilizing system performance under load

- Developed and maintained backend services using **Node.js and Express.js**, designing RESTful APIs for financial technology platform with focus on reliability and security
- Implemented authentication and authorization mechanisms, ensuring secure access control across application features

- Developed backend services and **REST APIs using Node.js and Express.js**, supporting various client projects and internal tools
- Designed and implemented **database architectures using MongoDB**, ensuring scalable data models and efficient query patterns
- Built **authentication** systems and integrated third-party services through API connections and enhancing platform capabilities

Projects

Node.js, Express.js, TypeScript, MongoDB, REST APIs, React

- Built comprehensive **workflow** automation engine and FAQ management system with **Node.js, Express.js**, enabling seamless automation and improving user query resolution efficiency
- Developed multilingual training module with intelligent content de-duplication using backend logic, significantly reducing API load and improving data quality
- Integrated **live chat** handoff capabilities through custom REST API implementations, improving human escalation success rates and customer satisfaction

NestJS, TypeScript, MongoDB, React, AWS EC2, CI/CD

- Designed **modular microservices architecture** for authentication, reporting, and data ingestion using **NestJS and REST APIs**, enabling rapid feature development and system scalability
- Automated **CI/CD pipeline with GitHub Actions** and Docker, streamlining deployment processes and enabling frequent daily releases

- Supported high-volume report generation with stable performance and implemented auditable RBAC access control using JWT authentication
- Built full-stack features integrating React frontend with backend microservices for seamless user experience

Education

B.Tech, Computer Science, Purvanchal University, Jaunpur, UP **2018 - 2022**

Senior Secondary (Science), M.V.M School, Aligarh, UP **2017 - 2018**

Coursework

Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, API Design
